Rapid tests

Rapid tests are designed for use where a preliminary screening test result is required and are especially useful in resource-limited countries

- High quality, easy-to-use tests for use in resource poor settings.
- Tests based on agglutination, immuno-dot, immuno-chromatographic and/or immuno-filtration techniques.
- Quick and easy to perform – 3 minutes to 30 minutes – and require little or no additional equipment.
- Are designed for use with individual or a limited number of samples, which make them more economical than ELISAs in low throughput laboratories.
- Possibility to store at room temperature for extended period of time.
- Same-day results provide timely treatment interventions.
